

“ARMED ROBBERY - PREVENTION AND SURVIVAL” (2.5 HOURS)

Is your business in a location that is vulnerable to an armed robbery and:

- Are the team members trained in how to prevent an armed robbery?
- Do your till and banking procedures and practices minimise the opportunity for armed robbers?
- Are there features of your premises or practices in store that make your business a soft target?
- Is your team trained in identifying and responding to suspicious behaviour?
- Is your team trained in how to respond (physically and mentally) in an armed robbery?
- Are there team members who have more courage than knowledge and may do something with an armed robber that is illegal or puts them or others in danger?
- Could Occupational Health and Safety law find your business an ‘unsafe workplace’ because of a lack of preventative measures and training of staff for armed robbery and therefore be liable to heavy fines?

Would you like a cost-effective solution to this problem?

There is no activity in an organisation that can do more damage to your team than an armed hold-up. Not only is a loss of life a real possibility but the potential trauma of an incident such as this can damage team members for life if they don't have the knowledge and skills to handle it. Having untrained team members may also be construed as having an unsafe workplace and make the business vulnerable to potential legal action and heavy fines under occupational health and safety law.

“**Armed Robbery - Prevention and Survival**” is a powerful, high quality, training program that educates and empowers team members in how to minimise the opportunity for armed robbers and how to prepare for and respond in an armed hold-up situation.

Topics include:

- Precautions to reduce the chances of being robbed
- How to act in life-threatening situations
- What to do immediately after the robbery
- Offender information
- Understanding post trauma stress and how to deal with it

The program is presented by specialist accredited trainers in this field. It comes with a printed workbook and a range of other resource materials is available.

An optional complementary service to this program is:

- An **Armed Robbery Audit** where an AW Security consultant examines your premises as well as your procedures and practices to identify where improvements are required.

TESTIMONIAL

“I now feel comfortable and confident in the event of an armed robbery. Our pharmacy has had some before. The content was very clear and provided a lot of useful information.”

Pharmacy Assistant, Kelmscott, WA
